

Sanitary District No. 2 commenced on-site construction of the Fifer Pump Station Modifications – Project No. 17-203 on January 21, 2019, and the project will continue for another 4 months. The Fifer Pump Station is located within the back parking lot for Joann’s Fabric, on a District owned parcel.

The project is a general rehabilitation project of the existing pump station including:

- Upgrading of submersible pumps to meet wet weather demands
- Upgrading and modernizing pump controls and Central Marin Sanitation Agency (CMSA) monitoring capability
- Adding pump station flow monitoring capability to improve ability for District to track capacity
- Replacing Diesel Generator with modern unit which meets current air quality standards
- Refurbishing wet well protective coating to enhance long term durability of the concrete

Most of the work for the project will take place during normal working hours from 8 am to 5 pm. Vehicle and delivery truck access will not be impeded by this project. There is no public vehicle or pedestrian right of way adjacent to this project because it is surrounded by the private parking lot.

If you have any questions regarding this work, please contact Mark Wilson of Nute Engineering at (415) 453-4480 ext 208. Or email Mark at m.wilson@nute-engr.com.
